PUMP CONSTRUCTION - PUMP WHOLESALERS

COMPETENCE OF THE HIGHEST STANDARD

Traditional company Traditional company

The name Redlin has been closely associated with the construction of pumps since 1890. We are the first choice when liquids have to be transported in shipbuilding or in industry. The product line of our company founded by the engineer, **Theodor Redlin in Kiel (TRIK)** as a sole proprietor company, ranges from hand pumps to modern pumping station

At the beginning he worked on the construction of wells and for the first time in 1947 he offered his own constructions in the form of self-priming

centrifugal pumps and pumping stations. Even at this time, production in accordance to individual customer wishes was at the forefront. Headed by Adolf Rönna, the successful one-man company became a business on 08 April 1958, which was then made into a GmbH, on 01 October 1985. The TRIK-Pumpen GmbH increased its product range with the take-over of additional production programs for gear pumps (Orsta Hydraulik - 1994) and centrifugal pumps (Loewe/Grundfos - 1996).

The TRIK-Pumpen GmbH is specialised on complete solutions, which of course includes the repair of pumps and the supply of spare parts. Around 20 qualified employees and a systematically looked after stock ensures short delivery times and expert service. Our customers are producers of large machines and shipyards worldwide.

Our pumps in operation at the motor construction site of Caterpillar Motoren GmbH & Co. KG

Top quality and service from day one

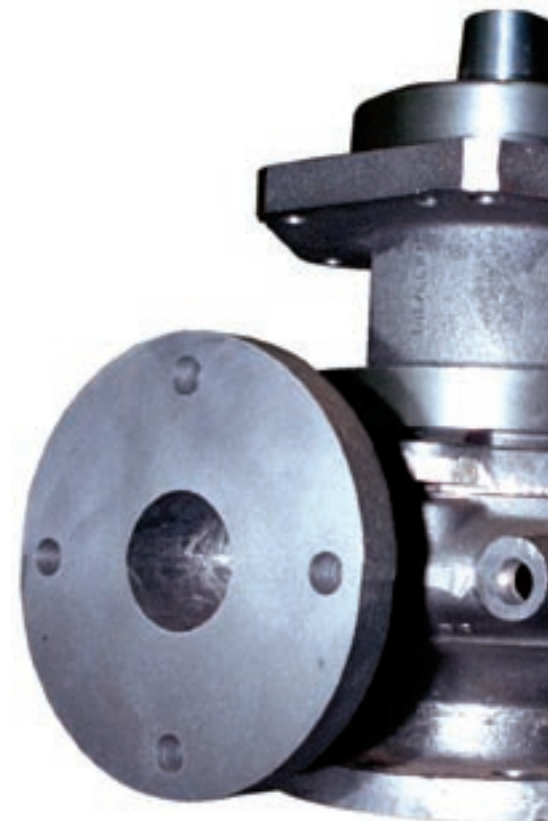

Apart from the European Union we are particularly interested in expanding in the Eastern European area where we have already maintained good contacts for many years.

Our pumps are used on the "Dream boat", the MS Berlin Shipyard: HDW

The TRIK products, reliability, flexibility and speed are the basic requirements for our business success. It is our goal to maintain the quality level we have reached and to increase this quality in order to satisfy and to surpass the expectations of our customers.

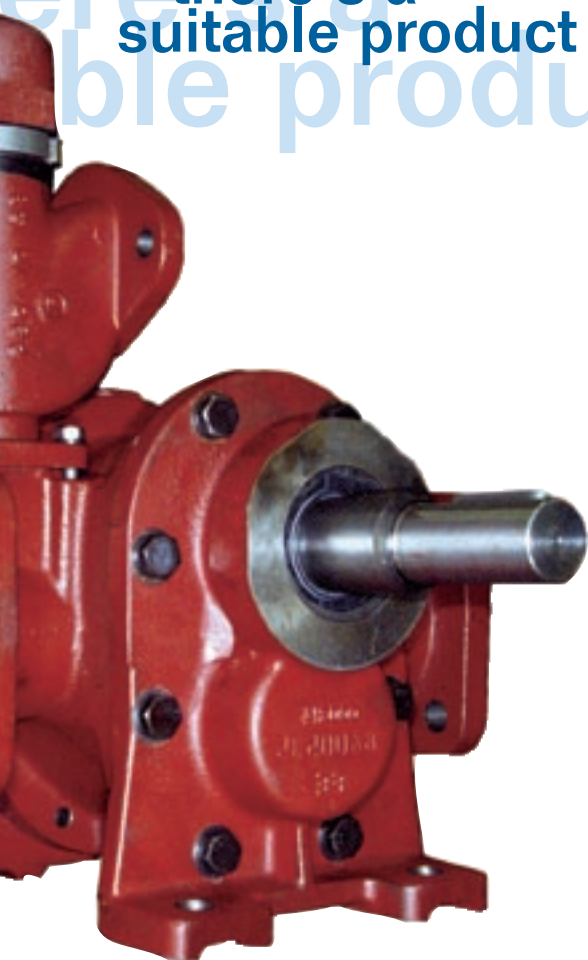

High quality products

High quality products

For every task
there's a
suitable product

No matter what kind of liquid needs to be transported; seawater, drinking water, heating oil or petroleum, our high quality pumps will win you over, thanks to their operational reliability.

TRIK products satisfy the highest demands for quality and precision, functionality and use-orientation with creativity and technical competence. A suitable product, even for the most difficult

*Highly qualified employees
ensure the excellent
quality of our products*

Competence through quality and innovation

task can be found in our product range.

One of our specialities is a sea water resistant pump which is made of bronze. We repair all different kinds of pumps and are specialised in the worldwide supply of spare parts; even those of other manufacturers. All pumps are tested on our test beds. On request, an internal factory report can be provided. Our extensive experience and competence in ship building is backed up by the official acceptance of various ship classification associations, for example GL, LRoS, BV, NV, ABS, Rina and the Russian register.

If requested we can construct made to measure units in close cooperation with the customer.

Housing of a sea water resistant bronze pump

The same as with all of our pumps, different kinds of drives can be employed e.g. electric motors, compressed air motors and diesel engines.

If you decide to purchase a product from our company you will soon realise that the quality and workmanship of our pumps, always satisfies the technical requirements and are suited to your individual wishes.

High quality standards

High quality standards

It is the ongoing goal of TRIK-Pumpen GmbH to provide high value, competitive products and service and to satisfy the expectations and the demands of the customers on schedule.

We are always working on maintaining and improving our quality management, from customer inquiry through to development, production, dispatch and customer care. All company decisions take into consideration our quality requirements.

*Project discussion
and coordination*

If deviations are recognised and can be defined, then improvements are carried out, in order to win and to keep the trust and satisfaction of our customers.

Our quality assurance system, certified according to DIN EN ISO 9001 ensures our customers of the continued reliability of our products. The basis of performance of TRIK-Pumpen GmbH and its high value products is the motivation, competence and flexibility of its employees.

Permanent qualification and the cooperative leadership style encourage a positive working environment and permit our employees to have a high degree of responsibility in their task area in order to satisfy the standards of quality we strive for.

Your satisfaction is our motivation

Naturally, our products comply with modern ecological standards and satisfy the corresponding regulations and

*We construct
individually, carefully
and tailor-made*

laws. For us, treating the environment with respect means that we use resources and leftovers in a responsible way.
